GAME

Den Slon ®

Intro: Add & Substract Fractions

- ⏩ GAME, NO PREP
- 👥 PAIR LEARNING
- 👀 ANSWERS INCLUDED
- 🧠 10 CARDS TO DISCUSS
- ✅ STANDARDS ALIGNED

CCSS.3.NF.A.2, CCSS.4.NF.B.3a, CCSS.4.NF.B.3b, CCSS.4.NF.B.3d, TEKS.MA.3.3.D, TEKS.MA.4.3.B, TEKS.MA.4.3.E, SOL.NS.3.2.a, SOL.NS.3.2.b, SOL.NS.2.4.b, SOL.CE.4.5.b, SOL.CE.4.5.c

Skills Covered by This Game

Use models to add fractions with like denominators

Calculate $\frac{1}{5} + \frac{3}{5}$ using a model.

Use a number line to add fractions with like denominators

Calculate $\frac{2}{6} + \frac{3}{6}$ using a number line.

Decompose fractions into sums of unit fractions

Write $\frac{4}{6}$ as a sum of unit fractions.

Add fractions with like denominators

Calculate $\frac{2}{5} + \frac{1}{5}$.

Decompose fractions as sums of smaller fractions in multiple ways

Express $\frac{5}{6}$ as a sum of two fractions in two different ways.

Use models to subtract fractions with like denominators

Calculate $\frac{3}{4} - \frac{1}{4}$ using a model.

Use a number line to subtract fractions with like denominators

Calculate $\frac{5}{6} - \frac{3}{6}$ using a number line.

Subtract fractions with like denominators

Calculate $\frac{8}{11} - \frac{5}{11}$.

Solve a word problem on adding fractions

Sophie ran $\frac{3}{8}$ of a mile in the morning and $\frac{2}{8}$ in the evening. How far did she run?

Solve a word problem on subtracting fractions

Emma drank $\frac{3}{5}$ of a bottle of juice. How much of the bottle is left?

Game Rules

1. All students act as either a **tutor** or a **tutee** and **change roles** and **pairs** at will.

2. Tutees earn **badges for skills** and pay with Slon-play-money to tutors.

3. A tutor or teacher can **review badges** and deduct Slon from the previous tutor if the tutee lacks the skill.

4. Winners: Those who collected all the skill badges without running out of Slon.

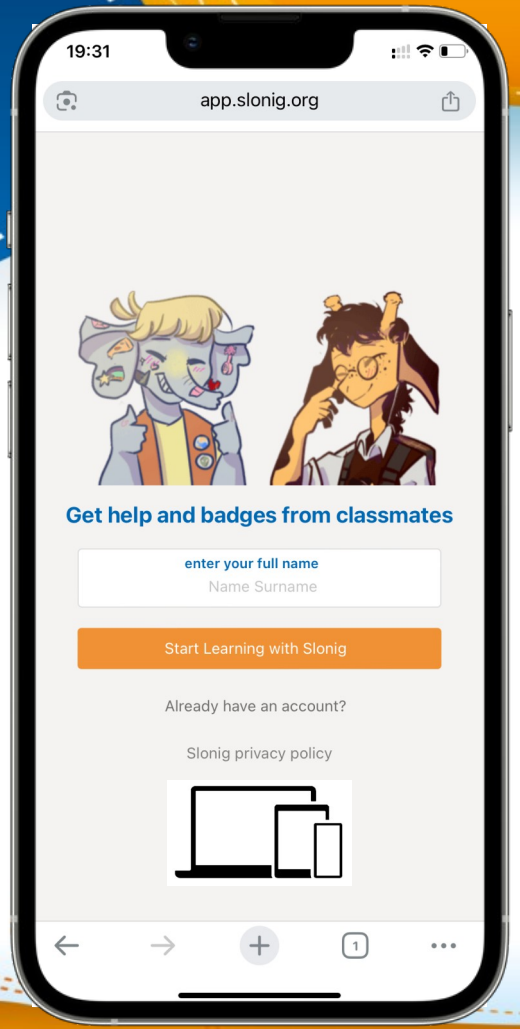
Slonig App



- ✓ **Guides classmates** on how to teach.
- ✓ Contains **all exercises** and distributes the initial **Slon**-play-money **equally**.
- ✓ **Stores badges** for skills.
- ✓ Supports **any device** with a web browser.
- ✓ Does not require login.
- ✓ **Aligned** with **COPPA** and **GDPR**

Intro: Add & Substract Fractions

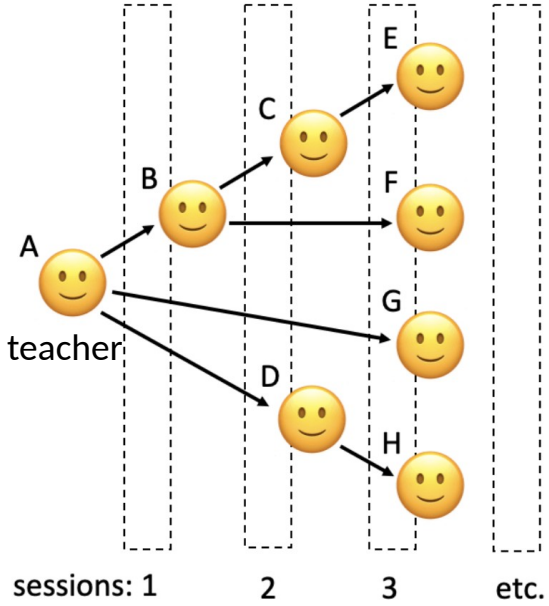
1. Tutee scans this QR code.

2. Tutor scans the QR code from the tutee's device.

3. Tutor helps the tutee face-to-face using hints from the app.

Teacher's note:
If your students have already used the Slonig App, just print this page and post it in the classroom.
If not, read the following pages.

First lesson



Give everyone any self-guided activity to keep the classroom busy, and take student B to work individually with you to demonstrate the rules.

You—the teacher—should take the role of the tutee (!) and scan the QR code from the previous slide. Work in a pair for about 5 minute session.

After the first session, have student D do the same, while student B pretends to be the tutee in a pair with student C …

Teachers Like You Say

⭐⭐⭐⭐⭐ **Natalie W.**

I was skeptical about students teaching each other — I even struggled to teach some myself. But after using the app, I saw how its built-in algorithm made teaching any skill simple. Every student could do it.
Mind-blowing.

Teachers Like You Say

⭐⭐⭐⭐⭐ **Olivia T.**

I'd like to say thank you — this way of teaching has actually reduced bullying in my classroom. Students now collaborate more because they get real help from their classmates.

Teachers Like You Say

⭐⭐⭐⭐⭐ **Harper M.**

My biggest concern was allowing students to use their smartphones, as our school lacks iPads. To my surprise, they actually talked to each other instead of secretly watching TikToks. Now I'm all in for peer learning.

Teachers Like You Say

⭐⭐⭐⭐⭐ **Isabella R.**

I'd suggest the author add some tips on how to reward students for the skills they learn. In my class, I give an A grade for every five skills mastered through this game — and some students even say their parents reward them for the badges they earn during lessons.

About the author

Denis Reshetov (aka Den Slon) is a scientist, educator, and father of three who bridges the science of life with the science of learning.

A published researcher on brain function in *Nature* and *PLOS Biology*, for ten years, he trained dozens of International Olympiad winners at the Center for Pedagogical Excellence and running over 80 science camps. In 2019, he founded a private school where he and other teachers created **Slonig**—a peer-learning method grounded in how the brain learns: through attention, action, and feedback. Today, he shares his methods and resources to **make teachers' work simpler**.
